

Summary

- Experienced Product Designer who turns complex workflows into simple, easy-to-use interfaces, prototyping in real code rather than just static screens to speed up delivery.
- Empathetic communicator who builds rapport easily, communicates clearly, and works effectively across teams. Highly coachable, with years of sporting experience that has shaped a growth mindset I bring into my professional career.
- A straightforward, empathetic communicator who brings a sense of humour and strong values. I naturally take the lead in organising team social activities, helping to create a positive environment where people genuinely have fun!

Experience

September 2025 - Today
Product Designer | [Perforce](#) | [P4 Plan & P4 DAM - Enterprise Software](#)

- Led the product design for P4 Plan and P4 DAM (Digital Asset Manager), for major enterprise clients like Electronic Arts, Pinewood Studios, Xbox Game Studios and Meta Games.
- Redesigned core product areas from the ground up, including a complete overhaul of search, filtering and onboarding. This directly reduced backend server load, improved clarity for first-time users and helped the team win dozens of new sales.
- Bridged the gap between design and development by building interactive, coded prototypes using React, Ember.js and the Force UI design system, rather than just handing off static Figma screens.
- Integrated an AI-driven workflow that allows designers to move directly from product manager notes to coded prototypes in Claude Code. By utilising the system's existing context management (CLAUDE.md) and slash-command tools, I helped design teams across the business significantly speed up their prototyping process.

July 2024 - July 2025
Product Designer | [Budibase](#) | [A Low-Code Platform For Agentic AI Workflows And Internal Tools](#)

- Led UI design across core database features in Budibase's enterprise platform, creating intuitive interfaces that helped the product stand out in the low-code market. Recognised in the no-code community for standout UX, with frequent mentions across forums and competitor roadmaps.
- Ran a paid research study with over 30 users to identify usability issues in the automation builder. Findings influenced roadmap priorities and led to a measurable increase in satisfaction and a reduction in support queries.
- Designed new AI-powered features from concept to prototype, including generative apps and smart workflows, ensuring alignment with user needs and business goals.

June 2021 - July 2024
UX / Designer | [Dawson Andrews](#) | [Digital Product Agency](#)

- Redesigned a B2C homepage using data-driven UX improvements that led to a 90% increase in conversions. This and future design and development work contributed to major new business opportunities for Dawson Andrews.
- Built and maintained a scalable Figma design system, improving developer handoff accuracy to 95% and reducing rework by 20%.
